V4L V4L is the core library of many applications that work with various video devices.  
Applications such as Linux, Windows and Mac OS X use . See V4L V4L is a library which provides an API for developers to use video devices. Using the V4L library, developers can create applications which communicate with various video . Multi-platform V4L supports any OS and platform, and is a highly portable . It is also the most cross-platform library . V4L supports Windows, Linux, Solaris, and several

---

Macintosh platforms. It offers a library to make connections to a variety of devices including TV Tuners, DVB receivers, video cameras, and V4L machines . Linux In Linux, the software used to communicate with V4L devices is called v4l-utils. In addition to the interface for webcam and video capture, v4l-utils supports the following : Device drivers There are kernel and userspace drivers that are available to be used with V4L. For more information, see V4L DMA and Video4Linux . Applications Various applications include window managers, image viewers and video editors such as FlicPlayer, Avidemux, Kdenlive, GStreamer and Ulead Video Studio. Some applications use a V4L driver that is not included in the standard distributions. For example, Kdenlive uses the external libavdevice ba244e880a
