QuickReportProfessional\_XE2.zip(66.65MB).Q: Change language of Contact Form 7 (Wordpress) I want to change the language of the Contact Form 7 plugin. All the others plugins I have installed work with a Wordpress installation, so I'm using Wordpress on a "standard" installation. I used to work on a multilingual Wordpress installation, but it's been a while and I don't remember where I changed the language. It's probably somewhere in the "Settings" menu but I can't find it. Does anyone have any idea where the language is set? Thanks in advance! A: Just open the CP (Wordpress customizer) for your theme and go to Appearance. From there you can make it your desired language. 1. Field of the Invention The present invention relates to a calibration control apparatus and a calibration control method. 2. Description of the Related Art A calibration control apparatus has been proposed that controls a calibration operation for a colorimetry system (see, for example, Japanese Patent No. 2684274). In the calibration control apparatus, a white standard color chart (a standard white plate) is scanned to obtain a scanner image, and the scanner image is compared with a reference white image obtained by the calibration operation, to determine whether or not a color drift has occurred. If the color drift has occurred, the scanner image is corrected, and the reference white image is again obtained. The scanner image is corrected until the color drift has been corrected. The white standard color chart is stored in a predetermined storage medium when the calibration operation is completed. The color drift varies depending on a color to be calibrated, a calibration method, and a scanning method. Thus, the calibration operation is performed again if the scanner image has not been corrected properly. As described above, in the calibration control apparatus, the scanner image is corrected repeatedly, until the color drift has been corrected. Thus, there is a problem in that calibration takes a long time.require\_relative '../././spec\_helper' require\_relative '../fixtures/classes' require\_relative 'shared/basic' require\_relative 'shared/float' require\_relative 'shared/dump' require\_relative 'shared/eq' describe "Array#compact" do it\_behaves\_like :array\_compact,
