A few months ago, I signed up with Stack Overflow Careers and found that it was impossible to login to the profile and I couldn't receive private messages. I had to change my Facebook password to receive private messages. I have an active account on Stack Overflow and I have now signed up for the Career's site, which leads me to suspect that having one's Facebook account locked would have been one of the conditions of signing up for it. Is having one's Facebook account permanently locked one of the conditions of signing up for Stack Overflow Careers? A: No, that's not a requirement. We only access your Facebook profile via our API, so we only verify that you have a Facebook account when you sign up. Phorbol diesters stimulate calcium influx in human leukemic lymphoblasts. The binding of (45Ca2+)2+ to T-lymphoblastoid cells (JURKAT) and acute lymphoblastic leukemia cells was determined in the absence and presence of phorbol myristate acetate (PMA), a potent tumor promoting agent. PMA induced a rapid and transient calcium influx, which was detectable before the onset of DNA synthesis and increased during the period of maximal DNA synthesis. These data suggest that calcium influx may be an early event in the regulation of cell proliferation and tumor promotion.Q: Java: Complex Factoring, Non Linear Diophantine Equation I got this question from my lecture notes, I can't figure it out. I did the brute force method, but it took a lot of time. What I want to know is there a better way to solve this? A: If you know that $k=\frac{n^2+1}{2}$ then this is a Diophantine equation of the form $x^2-\frac{n^2+1}{2}=0$ that you can look up. Cardiac image-based methods for the computation of the left ventricular volume in man. Cardiac volume imaging includes ang
