And I am trying to figure out how to find the path of that file in the memory. If I write the File.Path, I get System.Windows.Media.Imaging.BitmapFrame. I am interested to find out the path of that file in the memory.

```
string fullname = Path.GetFileName(Path.Combine(Environment.GetFolderPath(Environment.SpecialFolder.ApplicationData), "MyFoldername", "myfileName")); File.WriteAllText(fullname + ".txt", "This is the contents of the file.."); FileInfo fi = new FileInfo(fullname);
```

A: If it is a file in memory you want to find in code, you can use Code File.GetCodeTypeNamespaces(Stream) method. If you want the actual path of the file in memory, you need to store it in a variable. There is no standard way to capture the path of a file in memory. Look at the WindowsFileAttributes that contain the file name, the file path, file creation and file times, etc, and store it in a variable.

(CNN) -- The 31-year-old man suspected in a double homicide in Washington state that left one dead and the other critically injured was under police surveillance for two months, CNN's Connie Watts reports. Sgt. Ron Smith said police had been investigating the man and his girlfriend, identified by authorities as Ashley Powell, since March when a tipster reported to police that Powell and the suspect, Bryant Johnson, were involved in the murders of a man and woman. After Johnson was arrested on Tuesday, more than two months after he and Powell were reported to be in the area where they lived, police made the decision to place Johnson under surveillance. They also searched for the couple's children, a 7-year-old girl and a 4-year-old boy, and notified family members, the sergeant said. When Johnson and Powell were seen in the area of the murders
