system: Microsoft Windows 10 Adware, Bloatware, and Spyware are all considered as the worst malware. The need of having those extensions in a browser is quite understandable because without them, the software would be slow and consume too much CPU. But if you do not know the difference between adware, bloatware, and spyware, you could end up keeping such extensions in your

system. We must bear in mind that not only do they slow down your browsing experience, but they can also be responsible for your personal data being exposed. Browsers should be lightweight and shouldn't slow down the way it used to be a few years ago. In an attempt to achieve this objective, Google has opened up the Chrome source code in order to make extensions and browser themes

work. It was not too long ago when a web browser would always give us a blank page when we tried to open a site that was down. And why should it? That's because it was a normal status of the Internet, and a lot of time has passed since that time. What's changed, however, is that Internet speeds have increased, which means that even very slow web servers can be hosted

just fine. In fact, this is a rare case nowadays, and a good number of Internet users in the world use a high-speed service provider that allows them to access any web site with no trouble. The web developers have also realized that their clients do not have a problem with the amount of data they consume. In fact, it has been proven that a lot of people prefer to stream video rather

than download it to their mobile device. You don't really have to worry, though, since you can make Chrome work with a very slow connection. You need to know how, though. The browser is
