KEYMACRO is a program that can be used to record mouse clicks for later playback on the keyboard. The program's main purpose is to enable you to use the keyboard to type commands and see the results at a later date. Libraries and online help Libraries containing shortcut keys, common usage and command descriptions are loaded at launch and are displayed in a panel. This panel can be accessed any time and the operations you have recorded in the past are listed so that you can choose your preferred set of

options. The program can also be launched through an online help system. Keyboard shortcuts The program comes with a wide selection of keyboard shortcuts that you can use to automate your typing, work with documents and images and complete other functions quickly and efficiently. Computer networking The program is compatible with local computers, LANs and the internet, and you can have access to the files you have stored online on any of your devices. Program installation This

program is straightforward to install and doesn't come with any technical problems. The 1.1.0.2 update can also be downloaded automatically if you do not want to download and install it manually.

Memory consumption The program's performance is not going to be affected when it comes to using it, as the RAM usage is low at all times.
