Tools Tools are used to configure and control AutoCAD. They include the Ribbon, ribbons, palettes, buttons, menus, and drop-down menus. Functionality AutoCAD, and its successors, provide the functionality of traditional 2D drafting and some 3D models, including layers, blocks, families, text, dimensioning, datums, styles, command sets, and drawing exchange. As of 2013, AutoCAD is the world's most widely used computer-aided drafting program, holding a 70% market share. Modeling AutoCAD provides the capability to model in 2D and 3D. The 3D features include 3D drawing creation, component placement, 3D printing, stereolithography, and other 3D modeling options. For example, when the dimension or annotation tab is selected, there is a button for dimensioning. As of AutoCAD 2016, no 3D environment has the same capabilities of the current 3D modeling products that are available. 3D is a powerful part of AutoCAD's future, but it is not the current focus. Features AutoCAD has the features of traditional drafting, including drawing, annotating, and layout. It also has features for architecture, engineering, mechanical, electrical, and civil design. AutoCAD gives the ability to create any of these types of objects and features: Drafting Planning (architectural, mechanical, electrical, civil, and landscape) Rendering Displaying (presenting the drawing on a monitor screen) Sharing (storing the drawings on the cloud and sending them to other users via email or the cloud) Communication (in real time or when saving to the cloud) The following features are a subset of the full range of features. The Edit tab of the ribbon provides tools for editing drawing objects. There are commands for adding and removing objects, changing the style, and converting objects to other objects. The ribbon does not hide commands that are common to many drawing applications. For example, select all objects with a single mouse click and delete all objects by holding the CTRL key while clicking on each object. AutoCAD has many features that allow users to create their own commands. For example, one can build their own menu, toolbars, and palettes. The program offers a command window tool that allows adding a command.
