Standard look or remote HQ-Player also comes with a feature that allows you to use a remote in order to control playback. That doesn't mean that you can link your mobile to the app, but that the entire application transforms into a remote which occupies less space and offers the same functions. Just like with the main console, files can be added through a simple drag and drop motion. In the stereo version you do get a kind of a playlist (in which you can see two tracks) but the Remote look only allows you to see what's playing which is a bit of a bother. Conclusion All-in-all, HQ-Player looks nice but it does have its hiccups when it comes to performance. It sometimes crashes when you load multiple files and unfortunately it doesn't memorize the tracks you load so you won't have to add them again when you open the player next time. Most importantly, to play more than the standard audio or video files you need to install Standard Codecs. HQ-Player has the installer for them when you download it but you do need to be a bit careful as the codec pack is ad-supported.
