It can read and write the Flash Memory of the Microchip PIC, or any part of it, and also can be used to send data to an SD card, a Bluetooth module or a UART. Usbpicprog Main Features: Usbpicprog is a fully featured application for PIC users. In addition to a HEX file viewer, programmer, and executor, it contains over 80 user implemented commands. Of those, you will find the following features in Usbpicprog: - Flash Programming - Loading an application in PIC flash memory - Firmware Management - Basic Debugging - Zip File Management -...Q: How to check if a file in a directory is a Windows *.zip? I want to write a simple, portable script that will check if the current file is a Windows.zip file. How can I do that? It needs to be tested on Windows 7 (definitely) and any other OS. The script must run on linux, BSD,.... and probably other OSes. A: A Windows.zip file is a zip file with no compression. On Linux/BSD/MacOS a.zip file is usually compressed. Use file to find out the attributes. A: Not fully portable, but something that works on all systems I know of: printf '%x' "\$((file /usr/bin/python | head -c 4))" This should work for all unix systems that have an utf-8 version of Python installed. if ["\$?" = 0] ; then printf "Python is a zip file" fi Bash will expand variable inside {,...}, (... is whatever you put inside of [...]). Use backslash \ if you need to avoid that. A: The zipfile module can do this: import zipfile print zipfile.is_zipfile('/path/to/dir') (this is python 3.x) With the Arizona State Sun Devils playing the

Jasmin-fmsettings is a small Java application which is used to set the initialization values for the "Jasmin-FMSettings" server. Currently this Java application will load the configuration file from the filesystem which is set in the "Setup" dialog. Its a small configuration and no saving and loading options are included. Raspberry Pi GPIO to USB adaptor tool. This tool will allow you to do a system level debug on your Raspberry Pi GPIOs, exposing the 8 pins you can also use to control the header and shield for Raspberry Pi. It can also be used to emulate a keyboard or mouse on the GPIO pins. Use with the VNC or SSH tools. Its very easy to use, simply download the tool, unpack the tarball and run the Python program. After that you can do a PING against the device to test if it works and if the ports are configured properly. Also the tool can be used to do simple file transfers using the GPIO pins. It will read the GPIOs, and will write the GPIOs. This will not be extremely fast, but it is by far the simplest way to transfer files using the Raspberry Pi. First you should put your Raspberry Pi GPIOs to the correct mode (with an OS) and then tell the tool which port, and file name you want to write to. Then you can press "Start" to send the data. It will monitor a specific directory and will delete the files when it is finished. This tool is not intended to be used as a hard disk driver. The tool will also read data from the file, and it will show the data as it reads the file. Download free download Usbpicprog for Windows 7, Vista, or XP. This software is compatible to Micron PIC programmer. Usbpicprog allows you to open, open, create, create, and delete firmware image files.
