SEARCH and replace all occurrences in all books matching a given pattern. SEARCH and replace all occurrences in all notebooks matching a given pattern. SEARCH and replace all occurrences in all ppt files matching a given pattern. SEARCH and replace all occurrences in all documents matching a given pattern.

### What's New in the Speed Search?

===== Speed Search is a software to search, to replace and to compare the contents of one or several folders. Each function is implemented in three ways: Full text scan to perform a brute force search on folder and each file, by custom file extension filters and by custom character/byte-by-byte comparison filters. You can also specify the number of files to scan when you use the Fast search filter option. Speed Search is optimised for multi-core computers and allows to control its speed/performance. Speed Search allows you to easily replace several occurrences of a certain string in every file. It's designed to replace string in texts of every file and it is not efficient to replace a string only in a few files. If you want to use Speed Search to search for information in these files, you must first perform a full text search. You can also perform a comparison between two folders. With Speed Search, you don't have to manually compare the results of a full text search. Speed Search supports Unicode letters, numbers, letters and symbols. If you want to modify or replace several occurrences of a string in all your files, you must specify the number of occurrences (from 1 to 9999) and the replacement string you want to use (one character at a time). You can also define a filter to restrict the search to a certain file extension (incl.ing Word, Excel, PPT, PowerPoint, RTF,...). You can restrict the search to a specific character or byte in the content of the files (incl.ing ASCII, UTF8, UTF16, Unicode...) Key features: ===== Speed Search provides three ways to perform searches: 1. Full text scan With this method, Speed Search use the content of the files or the texts as an index. It allows you to perform a brute force search of every file or each text. With this method, Speed Search does not need to open the file or use the word processor or the viewer as long as the file or the text is saved. Thus, Speed Search is the fastest and the most efficient method to perform a search on your files or on your texts. For example, if you want to search for all occurrences of the word "banana" in your database, it is the fastest way. For example, if you want to search for "The Quick Brown Fox" in a database of files and
