WallpaperChanger is a simple application that allows you to apply a series of backgrounds and skins to any desired screen. It works very easy, and lets you customize the screen in no time. After having installed the application, the program downloads the screen and skins you select in the appropriate screen-saver style from the Internet and stores them on your local hard disk. Once you have chosen and downloaded the skin you want, you can select your desired wallpaper and apply it to your primary desktop. The tool allows you to create a single skin, or to create as many skins as you need, if you want your computer to look different at work, home or any other environment. The order in which you click the backgrounds in the list determines how they are arranged on the screen. Therefore, you can change the order and rearrange them according to your needs, since you will be able to change everything without having to touch a single parameter. For instance, you can select the font, background, dimensions, file format and the skin configuration of the different screens. Furthermore, you can specify the image compression to ensure that it is saved in the correct format and that you can only select the ones you need. All these options are presented when you first open the software. Another important feature of the application is that it keeps the backgrounds in your collection organized, so you can simply search for them and apply them in the order you want. Once you have saved the skins you like, you can create a new folder in the application to store them and create a shortcut to enable you to apply them at any time in the future. You can quickly access the skins you've saved in this way, since they appear when you hover over the folders in the application. Lastly, to speed things up even more, the application automatically removes the backgrounds from your collection when you close it. WallpaperChanger Conclusion: WallpaperChanger is a simple application that helps you to quickly customize your computer. It has a very easy-to-use and compact user interface, allowing you to apply a single skin or a series of backgrounds at any time. Furthermore, it automatically sorts the backgrounds in the order you specify, so you can quickly access the ones you want to apply and remove them by dragging them to the Trash when you close the application. Since the application uses only two files, one for saving the backgrounds and another for launching them, you can rest assured that it won't leave 09e8f5149f
