Developers creating new project types and project applications can use the SDK to extend Project and project management capabilities. These new projects allow developers to integrate Project with other applications including Project Server, Visio, SharePoint, Excel, and Project Web App (PWA). New projects can also create custom client projects that

extend Project Client to integrate with other applications. Every Project 2010 project has a structure that describes the common definitions and settings, and project data that can be used by the project. The XML schema for the project file is used by the developers to create, read, and update project data. The XML schema for the project file includes optional project data that the project developer can use to customize project definitions and settings. When a project is first opened, it can be configured for use in any of the 16 different Project-specific projects that can be created in the Project 2010 clients and Project Server 2010.

Additional projects can be configured to work with other business applications. These other applications can be configured to connect with

disparities in numerous health outcomes. While various sources have described the outcomes of these disparities, the mechanisms underlying them are often left unexplained. Additionally, the standard of care for patients of diverse backgrounds is often omitted. By exposing students, residents, and practicing physicians to a multitude of stories and roles, theatre can help to break down traditional barriers among health care providers and improve trust between the various patient groups. In this article, the authors discuss the ways in which theatre can be used to address race and ethnicity in medicine.
