It includes a few settings that can be seamlessly configured. Installation is not required, which makes the tool portable. You can drop the executable file anywhere on the hard disk and run it directly. It is also possible to save TeamViewer QuickSupport to a USB flash disk or similar storage unit, in order to use it on any machine with minimum effort. Administrative rights are not required. What's more, the Windows Registry does not get new entries, and files are not left behind on the hard disk after removing the utility. In addition, you can log all activity to file, use proxies, set up audio conferencing options (e.g. speaker volume, microphone level, noise threshold), as well as configure video source settings, such as quality. To sum it up, TeamViewer QuickSupport is a small and simple-to-use client module that quickly establishes a stable connection between two computers using TeamViewer.
