When working with any sort of project, it is important to understand the difference between a task and a job. A task is something that can be assigned to a person or a group. You might have to get coffee from the office kitchen and bring it to a meeting room. A task is what you assign to a group. A job is the job of an individual or a group. A job might be retrieving a file, putting it on a disk, or entering the information into the database. The difference between a task and a job is that a job is what you give to someone. You assign a task to someone. A task is something that is only up to you. You can do it yourself. The difference between tasks and jobs is that when you assign a job, you're giving it to someone.

A job is what you assign to someone. When you create a job, you're giving the task to someone. A good task manager is like a map of what you're doing and what your plan is. It lets you know when you've finished a task. If you're out of time, the task manager will let you know and suggest alternatives. As you complete tasks, they appear on the task manager and you can change them and move them around the time line.

The task manager is the central place to manage your tasks. The structure of the task manager: The task manager is a timeline with time frames. At the left, there is the current time. When you start a task, you

can see how much of the time remains until you start it. If the task isn't started, you won't see any time until you start it. The columns on the left are: Title: What the task is called Description: Brief description of what the task is. This is often used as a tag to the task, for instance an "e-mailing a project plan" task is a "e-mailing" task. Started: When you started this task. The actual date can be seen by clicking the date at the top of the screen. Progress: When you thought you were done, the percentage of completion is displayed here. If the task is ongoing, it won't be 100%, but the percentage. Finish: When the task is finished, you can click the date at the top of the screen to see what date you started on, and what date you finished on. Duration: When the task will take, how many

What's New In Gantt Chart?

Gantt Chart is a professional project management tool that helps you plan and manage any project schedule, such as a sales forecast, construction project, medical clinic, any building construction or project with a planned start and completion dates. Gantt Chart is easy to use. The interface is very intuitive, with just a few clicks and simple windows. Gantt Chart is designed to be used by business professionals as well as casual users. Multiple View at once Gantt Chart allows you to show a different view of your data (time, resource and tasks) at the same time. You can compare and visualize them together. For instance, if you want to check the progress of your production line, you can compare the tasks from the same resources on two different views. Smart Views Gantt Chart offers several views to help you keep track of your projects. The default view is showing the dates and resources, with the tasks in a “roadmap” style. This style allows you to easily see if the project is on track or needs changes. You can also create your own views that are saved to the user profile. There are five views available: timeline, roadmap, calendar, tree and details.

- Timeline: Show projects in timeline view that are displayed by time interval.
- Roadmap: Shows your project as a roadmap. You can easily see when the next project must start.
- Calendar: Includes date and time from all your projects, which you can modify if you want. You can even use it for events or vacations.
- Tree: Show the detail of your tasks. You can edit it if you want to.
- Details: Shows the details of your tasks. You can edit it if you want to.

The buttons on the right will be replaced by icons depending on the view you are using. To switch between views, just right-click on a button and select the desired view from a menu. Color-coded workflows

Gantt Chart allows you to view your project in a variety of colors. This makes it easy to visually follow your projects. You can view tasks in a different color from the other tasks, so you can easily differentiate one from another. You can also use the color of tasks to create workflows. Graphical representation of your projects Gantt Chart allows you to represent your projects graphically. You can add any tasks or resources to the timeline. There is no need to use specific windows for each resource or task. You can simply drag and drop. The project appears on the timeline as an image that you can resize to display your resource more clearly. Multiple window for each project You can edit more than one project at the same time. You can show more than one project on the same timeline. Multiple projects at once You can also have multiple projects shown at the same time. Gantt Chart can display up to 30 projects
