More details...Q: VLC is no longer playing audio after upgrade to 13.04 I have just upgraded to 13.04 and noticed that VLC no longer works to play music. It seems to be related to the system speaker because the output seems to be playing a looping song while no other applications are making sounds. I'd prefer to keep mp3 support in VLC. Is there a fix available for that? A: It turned out to be a VLC related bug and was fixed via backport. The following options are available: --no-audio --audio-help --audio-output-device=help --audio-codec=help

A theoretical investigation of the effects of methadone dose and route of administration on the pharmacokinetics of codeine in the rabbit. Methadone (Dolophine) is a new synthetic opioid that has been shown to be effective in the relief of pain in the terminal stage of cancer and in labour. The mechanism of action of methadone in acute opioid toxicity appears to be competitive antagonism of the mu receptor for morphine and, as such, the effects of methadone on codeine pharmacokinetics would be expected to be similar to those of morphine. The aim of this study was to determine the effect of methadone dose and route of administration on the pharmacokinetics of codeine in the rabbit. In addition, the effect of methadone on the pharmacokinetics of a variety of other drugs was examined. In each case, three doses of methadone (0.3, 0.5 and 1.0 mg/kg administered via infusion and 2.0 and 4.0 mg/kg administered by s.c. injection) were administered to rabbits. In addition, the

Network Test Generator is a compact application designed to help you test your network connection by sending a number of packets to a certain IP address. The program can be configured to send the packets from a specified IP address or to randomly generate the source address. You can change the port number and the process importance in order to quickly perform the test. Network Test Generator Features: The program can be configured to send the packets from a specified IP address or to randomly generate the source address. You can specify the chosen port number to connect to the specified address. You can specify the process importance to quickly perform the test. The program stores all the information generated by the packets test for later reference. Network Test Generator can be used to test computer network connections. In order to do this, you must configure the program to connect to an IP address you want to test. This application can be configured to use a specified IP address or to randomly generate a source address and send these packets to that address. When the packets are sent, they are stored in a text file that can be later referred. The amount of packets that are sent during the test can be specified in the application. If the packets are sent from a specified IP address, the program waits for a specified amount of time before sending the packets. If they are sent from a randomly generated address, the packets are sent instantly. atSynek Spoofek lets you quickly test your network connection. The application has a built-in packet counter that keeps track of the number of packets sent during the test. Once the test has been performed, the application can be set to store the results in a text file that can be used in the future. It's convenient to use the file in the future since this application saves the information you want to use in the network test in the same file. This way you can quickly know if any changes in the network settings have affected the test. The application is set to automatically run whenever a network connection is made. Network Test Generator includes a comprehensive overview of the packets that have been sent during the test. You can print the overview in order to quickly view the result of the test. Network Test Generator also offers the possibility to load a text file to quickly refer the information generated by the packets test. You can include the number of packets sent as well as the port and IP address used by the application. You can change the process importance in order to quickly perform the test.
