i have copied the code from this page : but it doesn't work, i mean i can't download that old version (which means that the command works). any ideas how to fix it? thanks. A: Installing WINE should fix it. Traditional medicine is gaining momentum, making its way into schools, and even the court system. The World Health Organization estimates the global annual trade in

traditional medicine to be nearly $100 billion. Globally, it is assumed that 60% of the population relies on traditional medicine for their primary healthcare needs. In the United States, it has been determined that 30% to 50% of medical expenditures are considered unnecessary, and a recent study has been completed with the FDA to estimate that as much as 80% of new drugs are ineffective, and certainly unsafe for a significant percentage of the population. While traditional medicine holds promise, it is estimated that, at best, only 1/3 of the traditional remedies have even an early stage of science-based investigation. Thus, many innovative new treatments are being ignored by mainstream medicine, and by the public. While the vast majority of medical studies today are focused on prevention, diet/nutrition, physical

fitness, proper lifestyle and maintenance of a healthy weight, and mainstream medicine continues to report growing awareness of the importance of proper diet and nutrition, major progress has been made in the past 5 years in the field of pharmacology. As such, there is now a growing appreciation of the roles of both naturally occurring and synthetic compounds, foods, and physical activity in disease prevention and management. With an increased awareness and appreciation of the synergistic effects between life style and pharmacology, the practice of medicine in traditional medicine has been rising in popularity and acceptance. This trend is most notable in developing nations where access to primary health care is often restricted. Not only is the cost of care in the United States outpacing the ability of most

people to pay for it, but there is a dramatic increase in the number of uninsured individuals, many of whom seek care in traditional medicine outlets such as clinics, and pharmacies. Many patients are under-diagnosed and mis-diagnosed by the mainstream medical model because the number of healthcare providers does not match the increased demand for health care.
