WS Port Listener Crack PC/Windows (2022)

[Download](#)

Port Listener is a simple, smart and easy-to-use programthat runs in the system tray. When activated, it opens a port that you specified for monitoring, so you can check if a certain user connect's to that port. Port Listener will make a sound (if you specified one) when a

user connects, it will also give the user's ip host etc and will keep a log of all connects. The program also keeps sending a text which you specified to the user until he disconects from that port so he knows he has been catched. Port Listener is created to catch those guys that do portscans on your system for a specific

port, for instance the trojan (a trojan is a kind of virus that lets user control your pc remotly) sub7 which mostly runs at port 27374, so you let the program monitor on that port. Then when someone is doing portscans to see if you are infected by sub7 you will be alarmed of this and the user keeps getting the text you

specified in his portscanner (like 7th sphere) until he closes or reset the portscanner. So the person who did the portscan will know he is caught You can then check the log for the persons ip and host and with this information you can find out what provider there using and find their providers web site

to sent them an email informing them of the person that does these portscans (give an extract of the log with the date and time) and they will make sure the person will be notified of these 'illegal' (in some countries portscanning is legal) actions. WS Port Listener Crack Mac Features: Many options for you to customize

the program. You can choose the sound you want to play. You can choose the text (if you specify one) you want to display. You can choose the port number and the interval (how often to keep an eye on that port) You can save/load a custom config file, and you can specify which day of the week you want the program

to start to monitor that port. You can specify that the 'beep' sound will be played when the log is full and you can specify if the program will wait for a user to disconnect or not. WS Port Listener Crack For Windows (recommended) Installation: You will need the following things installed: The following program I

have some knowledge on it's aim: WS Advanced Port List

WS Port Listener Keygen For (LifeTime) Download [March-2022]

þWS Port Listener Crack is a free, full-featured program that runs in the system tray, opens a port for monitoring (you specify which port), makes a sound, and keeps a log of all connections to

the port, if the user disconnects, he gets a text with your specified message, and so on until he disconnects or enters a wrong password. It also keeps sending a text to whoever is doing the portscan and waiting for a response to disconnect him. The program can also check your IP for WHOIS and DNS

records and check if the host is owned by you or not. The program uses a free code of OWASP that you can find here: Input Specification: - The program runs in the system tray. - You can specify one or more ports to monitor. - Port monitoring should start as soon as the port is set up. - You can define a sound for

each port. - You can specify a waiting time between logs. - Every host and port must be specified in the same format. For instance, if you specified //10.1.2.3// but not //10.1.2.3// as well, the program will not work. - You can specify a message to show to users for every connection. - When you set a message (you

can also change the default message), you can select a sound that will be played when the user connection is detected. - You can define a text that you want to show to those who are doing portscans. - You can specify a time-out for the user to disconnect himself. - If you don't specify a time-out the program will

disconnect the user automatically (if you set the sound). - You can enable/disable the randomization feature. - You can also enable/disable the search for other IP's and host records. - You can define the IP/host format to be used: IPADDRESS/IPADDRESS.IPADDRESS.IPADDRESS.IPADDRESS IPADDRESS/IPADDRESS/IPADDRESS

/IPADDRESS IPADDRESS/IPADDRESS/IPADDRESS/IPADDRESS.IPADDRESS IPADDRESS/IPADDRESS b7e8fdf5c8

-> A self-service Port Scanning system -> Check all service on a port -> Keep a record of all the activity on this port -> Logging and Textifying. -> Alert other user and user of illegal activities -> Verification and temporary jailing of the owner of illegal activities. -> Ping for

every connection. -> Upload log with date and time of the scan to www.classical.net -> Preview of the port every minute -> Notification of illegal activity of owner of the illegal activity (by mail) -> Detailed Logging (including date and time) -> Possibility to add other ports to monitor -> Log the ping by the client if

activated -> You can also add text logging RUNS IN SYSTEM TRY -> On a desktop, there is no trouble -> On laptop, a problem may be added SUPPORT, IT'S YOU THAT WILL SUPPORT ME IF THERE IS A PROBLEM WITH THE PROGRAM YOU CAN FOR MORE INFORMATION EMAIL TO: srygour@yahoo.fr NOTE: IT'S BEST IF YOU

What's New in the?

_____

_____

_____ Port Listener allows you to view and manage your users connections to the world, in case the program is not installed, you may be able to still view some of your users IP addresses. You can view all connected users for each port and even the time they

connected. You can monitor both IP (IP Address) and host (Name, Description, User, Ip, Port, Length, Class, Flags, TCP or UDP, User, Port). The program will also beep when a user connects/disconnects to a port you specified. You can define a sound, you can even have an interrupt sound so you know a

user connect/disconnect with any port. This program does not use any of your resources, it runs in the system tray, a user will not notice the program is running. _____

Program Features: - Monitor connected Users on a specific port, even if they do not have the program installed. - You can monitor all IP and host (Name, Description, User, Ip, Port, Length, Class, Flags, TCP or UDP, User, Port) - You can monitor if a user connects or disconnects to a specific port, even if he

doesn't have the program installed. - You can specify if a user will be alerted via beep, sound, text message or nothing. - You can specify if you want the program to pause when you open a port. - You can specify how many times a user has to be conected in the program. (example: you need to have a

pause of 30 seconds before it connects again, it is like a limit). - You can specify if it automatically enters a portscan with the IP address of the connected user. - You can specify a limit on the number of user you want to monitor at once for that specific port. - You can define a sound, you can even have an interrupt

sound so you know a user connect/disconnect with any port. - You can define a beep (a sound, like a door bell) when a user conects to a port you specify, or a beep and text "Your IP was captured!" to alert him of a capture. - You can configure the program to receive a text message in your default email client. -

You can define a text message. - You can define a log of capture to

Installation: Unzip the archive and run the supplied setup.exe. To install: - Select "Option #1: Install precompiled binary" - Select "Option #2: Install package" - Browse to the folder where you have extracted the files and select the appropriate file, then click on "Next". - If you have a

Microphone or Speakers plugged in, unplug them first. - Wait while it installs. - Press any key to return to the main menu.
