Features This section explains the major features of Photoshop. **Frame** The frame tool makes it easy to create and edit rectangular shapes. It's useful in aligning layers, merging or splitting shapes, creating geometric shapes, and more. The frame tool works as a guide to create the shapes you want. To use the frame tool, select the Toolbox Icon, the Rectangle Tool, and drag a square anchor. You can also click the Inset button to the right of the line used to scale a shape. When you do that, the anchor will be moved to the position of the center of the bounding box. You can move the anchor at any time. As with all other tools, you can adjust the size of the anchor by clicking the left or right edge of the anchor box, dragging, and releasing. The frame tool provides a distinct advantage when it comes to alignment. Simply click the left or right point (anchor) of the shape and drag, and the shape will be adjusted. This will create smooth transitions. For example, select the Add Rectangle tool (R) and click the bottom of the shape. Type 4 to display a 4-by-4 selection and drag upward. The shape you create should have the same height as the anchor. **Objects** The primary objects in Photoshop are pixels, or raster images, but there are other kinds of objects that can be used with Photoshop. These include shape layers and text layers. Shape layers enable the creation of graphical shapes that can be filled or manipulated. You can combine shape layers and text layers to create banners, graphics, and more. There are also path layers, which are used to generate closed paths. This type of layer lets you create and modify paths and shapes that can be filled. **Image Style** The Image Style feature lets you change the appearance of an image with various effects. You can adjust color to suit a specific style and even set the background color and color of a highlight or shadow. You can also use Image Extras, such as vignette or posterization. **Exporting images** The Export feature lets you export an image in a variety of file formats, including JPEG and TIFF. You can save the image to a format that uses lossless compression, so the file size will be smaller. **Layers** The Layers feature enables you to create a new layer and import a previously created Photoshop file. Highway 93-117 is approaching full use. The Port Alberni General Store is the exit. Once you've taken one left from there, you may want to look for a road map to find the way. Highway 104 is a little less confusing. The township of Port Alberni is just a little to the left, and Highway 11 is the right. Because Highway 91 and Highway 11 are separate, high-speed, well maintained roads, if you do take Highway 91 through to the south, you should get there just in time. Don't take Highway 91 into town if you're driving into town from the north because you are on a dead-end street, with no way out except by taking the one exit (just one), and the one exit is fully expected to be jammed with traffic. Don't take Highway 91 into town if you're driving into town from the north because you are on a dead-end street, with no way out except by taking the one exit (just one), and the one exit is fully expected to be jammed with traffic. To avoid the one exit problem, take the one exit south of the town on Highway 11. If you're driving south on Highway 91, stay on Highway 91 to Port Alberni. At the top of the hill right on the highway is the Highway 11 exit (or take Highway 104 west into town). On the left are some hairpin turns, you want to keep left at this point. The road ends at the road to the park. Take the Lower Road north out of the park. When you come to the fire road on the right, turn left onto that road (it looks like a dead end, but it has a little traffic at it). You need to travel north, on this road, across the hill and turn right on to Highway 11, the road goes right into town. If you are just going to the park, don't take the one exit (on the left), on Highway 11. Keep on the right, make a left at the exit for the park. Turn right onto the road into town.
