Note If you use a Mac, have the Adobe Photoshop program that you downloaded for Windows installed on your Mac, too, if you like. It works as well as you expect it to. ## Installation & Basic Setup Adobe's preferred method of acquiring and installing Photoshop is to have the CS3 program—Standard, Advanced, or Elements—streamed to your computer. You download the Adobe Photoshop program and then install it the first time you use it. (See the box on the next page.) When Photoshop is running, it automatically checks for the latest version of the program and automatically downloads and updates the program. You can also download an installer package of the program. The installer package brings along additional files, plus it installs a slew of new features, including some more advanced tools, plug-ins, and the like. These new programs and features make some tasks like retouching and digital painting much easier than before. Up until CS3, when you finished with an image, you didn't have the option of saving the changes you made. With CS3, you can save your file at any time. The instructions that follow walk you through the installation procedure for Photoshop CS3. Because it will replace your current version of Photoshop, you need to back up any existing files that you might have. You can also get Adobe Photoshop CS4. Check the last section of this chapter for details on installing that version of Photoshop on your computer. ## Downloading the software You download the Photoshop program itself from _Adobe.com/_Products/Photoshop, as shown in Figure 4-4. For the Macintosh version of Photoshop, your download link is _Adobe.com/products/photoshop.jsp_. Many beginners, especially those with older computers, use the Adobe Photoshop Elements program. That program is available only for the PC, but you can get the version for the Mac at the same Web site, as shown in Figure 4-5. Download the version that's right for you—Standard, Advanced, or Elements—by following the steps in the following sections. Figure 4-4: Download the Photoshop program here. Figure 4-5: If you're not sold on the Elements program, download the Mac version of Photoshop here

Is there a way to show how many cities we've been to in the United States without taking a jaunt on the road? Get ready for a spooky good answer! Fear not, I have a really good reason why I can't be going to each city in the United States -- my husband did. If that is all it is, I'm giving a big five-star Amazon rating. It's a good blog for a lot of reasons, not least of which is how often it pops up in the "What I've Been Reading" section of my Kindle. It's also a great way to learn about some pretty cool topics. So, on this Halloween, I've decided to share a list with you (the list of cities that I've been to in the last 11 years) to help you celebrate. My answer to this question should be surprising, but just try not to let it actually disturb you when it gets to cities I haven't actually gone to. Also, if you want to be forewarned, try out the "Scary" button to the right. And of course, you should read my answer too, just so you can be prepared and not be freaked out by a virtual ghost. So, here are the answers to the question: (In no particular order.) Are you there? I can hear you!

Q: Advanced Google Maps API v3 - JSON / PHP I'm trying to code an application for my web page that uses Google Maps API v3. I want the application to connect to the Google servers, get some data and then display it in a table. I believe the issue comes at the response - I don't know how to work with the php code that returns JSON. How can I display this data in a table? Is it easier for you to see the raw PHP code below? PHP

```
foreach($rows as $row) { //print($row->id);
//print($row->name); foreach($row->data as $each) { //$id = htmlspecialchars($each->id); //$name =
htmlspecialchars($each->name); //$phone = htmlspecialchars($each->phone); //$street = htmlspecialchars($each->street);
//$city = htmlspecialchars($each->city); //$country = htmlspecialchars($each->country); if(isset($each->id)) { //$id =
htmlspecialchars($each->id); $id = htmlspecialchars($each->id); } else { $id = htmlspecialchars(strval($each->id)); }
```

System Requirements:

The system requirements may vary depending on what you are using, such as the resolution of your monitor, graphics card, and processor. You can increase the resolution by making changes to your Display settings, or by changing the resolution from the X Server control panel. Control Panel Resolutions: If you are using a resolution higher than your monitor can handle, the displayed image may be stretched, and move around the screen. An added effect can be caused by changing the resolution too close to the screen's native resolution, which may cause you to see horizontal or vertical
