expanding its Pay With a Scan feature to all Prime Now Pickup  
stores in the U.S. This means that GoMo customers can now use  
their smartphone to pay for their shipments at any of Prime Now's  
1,900 stores. Like before, the system is available to those in  
California, Colorado, Connecticut, Maine, Massachusetts, New  
Jersey, New York, and Rhode Island. Other states are coming.  
According to Engadget, the company is planning to bring the  
feature to its stores in New York, Maryland, and Virginia in the near  
future. Amazon tells us that the other 30 states will follow, but we  
can't say when exactly they will be adding it. Amazon is expanding  
its Pay With a Scan feature to all Prime Now pickup stores in the  
U.S. The goal is to make it easier for customers who use Prime Now  
to pickup purchases on the go. Right now, if a customer wants to  
use a GoMo, they have to use the app on a smartphone, open a  
shopping list, and then scan the QR code when they are at the  
store. The last time we heard about the program it was called Plan  
to Pickup. But we know the feature is available at select stores for  
customers of Prime Now because the company made it available to  
GoMo users at certain locations. As we have reported before,  
Amazon's partnership with Instacart lets GoMo users order  
groceries through the app and then have the shopping lists and  
purchased items shipped to their home. The expanded Pay With a  
Scan feature is available to all GoMo users in these states. For  
those in other states, the program is still limited to those enrolled  
in the cloud service. "You will be able to use scan to pay for orders  
placed on the Amazon.com website or through in-store pay with a  
scan apps for those customers," Amazon says. Amazon is  
expanding its Pay With a Scan feature to all Prime Now Pickup  
stores in the U.S. Amazon says it has been working with the store  
owner community for some time to bring this feature to its stores.

Worms 3D and Worms for Windows 98.Q: How to draw the Delaunay triangulation? Here is the code: 

```
import math
import numpy as np
from matplotlib import pyplot as plt
from scipy.spatial import distance
fig = plt.figure()
ax1 = plt.subplot(1, 2, 1)
ax2 = plt.subplot(1, 2, 2)
A = np.random.random((500, 500))
B = np.random.random((500, 500))
D = distance.cdist(A, B)
B0 = [-1/np.arange(N*1, N*1+N), -1/np.arange(N*1, N*1+N)]
C = np.vstack([A[k] for k in range(len(A))])
plt.plot(B0, C)
plt.axis('tight')
plt.show()
```

 The Delaunay triangulation is plotted in the figure. But, how can I draw the Delaunay triangulation? A: The `scipy.spatial.Delaunay` module has a function `triangle_triangulate` which does just that: 

```
import matplotlib.pyplot as plt
from scipy.spatial import Delaunay
import numpy as np
def draw_delaunay(f, N=100, l=100):
    """ Draws the Delaunay triangulation of a set of points.
