Although the next few sections give you some Photoshop basics to start your journey, you can't just jump in and make your first Photoshop image. You need to prepare your Photoshop installation before learning about how to use its features. See Chapter 13 for information on setting up Photoshop. Creating raster images Photoshop uses the raster image format for all your image editing. With Photoshop, you can also save a raster image into the BMP, GIF, JPEG, PNG, or TIFF formats, but the raster image format remains the primary format. The raster image format is the only image format you can edit as pixels. If you try to edit an image using a vector format, such as Adobe Illustrator or Adobe InDesign, that image is converted to pixels and edited pixel by pixel. For example, a pink image in Illustrator is simply a filled circle with a fill of pink. You can change the colors by changing the pink color of the circle, but this changes the pixels. If you change the pixels, you change the pink circle. You can do this until you're blue in the face, but it simply doesn't work; it's a pixel by pixel job. An image you create in Illustrator is composed of vector elements. You can size those elements exactly as you design them. You can also change the elements without changing the edges or outlines. Even though the picture looks great as a vector image, it takes up much more space than a raster image for a small picture. One of the joys of working in a raster-based program like Photoshop is that you don't have to "save" a vector image. If you're working in Illustrator and you inadvertently click the image before saving, you can simply open the file. Working with Photoshop's most common file types Photoshop has two file types that you can use when you make or open a file. The image file itself is in the RGB or RGBX color mode format and uses 24-bit color. This file type allows you to create any color — pastels, solids, or any color you want. This file type also allows you to create grayscale or black-and-white images. You also have the Photoshop.psd file. The.psd file is an intermediate file type and isn't the final file format that you save your images in. You save your final file in a format such as JPEG or PNG. The.ps

The country of Japan plays a significant role in the automotive industry. The Japanese market forms the largest global vehicle market and has great demand for electrification, including energy storage and vehicle to grid (V2G) integration. According to a study by the Society of Automotive Engineers, the United States has surpassed Japan as the world's top car market in 2018. It is not just the dominant economy in the world, but also in the vehicle market. On the other hand, the automotive industry has seen significant changes and change-ups with the advancement of innovation, lifestyle, and technology. As a result of these shifts in the automotive industry, the market for battery electric vehicles (BEV) is expected to experience sustained growth. BEVs are growing fast due to the low costs, higher performance, and higher efficiency over internal combustion engines (ICE). Some recent research suggests that the global market for BEVs could grow to 4.8 million units in 2025, which would account for nearly half of the global electric vehicle (EV) market. Surprisingly, while BEVs are leading in sales, Narrow-Body Electric Vehicles (NBEVs) are expected to outsell BEVs in the same time frame, in part due to their higher profit margins. NBEVs are BEVs that are slightly modified to include a front trunk/fender, and offer more comfort and convenience. BEVs will become more popular as they become more affordable and have more vehicle share. NBEVs are expected to outsell BEVs in 2019 because they are better-suited to commuting, traditional urban driving, and do not sacrifice driving range or performance. While BEVs will continue to grow, NBEVs will rise to dominance in the next five years, likely due to their higher profit margins and lower costs. As a result, NBEVs will account for about 44% of the global BEV market, while BEVs will capture about 31% in the same time frame. NBEVs' popularity is growing quickly. In 2019, according to research by the Society of Automotive Engineers, NBEVs will account for about 63% of the U.S. market and 38% of the global market. BEVs are electric vehicles that use batteries as the sole or primary source of power for driving. They are being used as a secondary or supplemental source of energy, in addition to that derived from a traditional combustion engine
