
Fifa 22 [Win/Mac]

As with every FIFA in history, FIFA 22 has a focus on the little details. Most noticeable is the ability to lock the movements of your players, a feature that has been long-awaited by soccer fans. Here are several features introduced in FIFA 22 that should make this year's new addition to the FIFA series a must-have for soccer fans. Smart Control One of the biggest new additions to FIFA 22 is an all-new, intelligent control system. This control system learns the standard attacking and defending styles of each player, and applies those techniques into better training drills. Real, actual, live tactics are created by the game as players run through training drills based on their actual, real-life abilities. These tactics are then applied to the game, and every time you play, it adapts based on your inputs. The game features a wide variety of AI-controlled teammates, as well as larger player controlled agents. In the mode, there are no scripted, generic AI passes. Instead, your passing options are based on actual player attributes. The game also includes a variety of Player Movements modes, such as Quick Pass, Break Away, Speed Control, Dive Control and Precision Passing. A detailed overview of each of these is available online at Live Training This is a feature that is rare in sports games, but this year's FIFA is bringing it to you first-hand. A year ago, FIFA introduced Live Training for the first time in an EA Sports title. This year, that feature is even better. AI controlled teammates can now be moved around in the training mode. This allows you to "ghost" your own player, like a manager, and play with an AI for a more realistic experience. Rounding out the arsenal of new Live Training features are updated Virtual Passing and Tackling options. Virtual Passing options allow you to play the game like a manager and give players specific instructions during training sessions. Tackle measurements are also tracked, and that can be viewed as a coach or player. Tackling is a big part of playing the game and you're going to want to learn how and where to go to make the best impact on the ball. We have a full breakdown of how to measure a tackle, from how to start

FIFA (Fluid Intelligence and Footwork Acceleration) is a uniquely authentic, deep football experience, built for the next generation of console players. You will experience what it's like to be a player. You will feel what it's like to play football. The game introduces an entirely new player intelligence system, including real-time updates to player awareness, ball possession, and acceleration. Players will no longer just recognise and react to the ball, but will anticipate, make decisions, and execute moves at a pace worthy of the most exciting players in the world. The gameplay of FIFA has been drastically improved, with a new balance system, new dribbling system, and improved shooting mechanics.

Enhanced Player Intelligence - How can you play football like a pro without making any mistakes? Player intelligence—a critical component of playing football—is fundamentally improved in FIFA 22. Players can now read the game just like they would in real life and make decisions at the speed of real players. You will feel what it's like to be a player.

New Balance System - FIFA 22 delivers a new balance system that makes positioning adjustments during gameplay more intuitive and responsive than ever. Players can now pull off the perfect tackle and make top-speed long passes, and as the game progresses, the complexity of moves will be tailored to the players' skill.

New Ball Control System - Building off the success of the new player intelligence, the new ball control system in FIFA 22 delivers significantly improved ball control and shot power. Every dribble will feel more confident, dynamic, and accurate with the ability to sense the next step on the pitch.

New Dribbling System - Pick-up the controller and the rhythm of dribbling will be instantly familiar with unique artificial intelligence (AI) that will anticipate your moves. We've taken cues from the best dribblers in the world and added a new dribbling mechanic that allows you to receive the ball at your preferred angle, execute a fast cut or stutter-step, and use an on-the-ball slide to change direction. If you are a dribbler, this is the game for you.

New Contract System - The new contract system in FIFA allows you to sign contracts with your club, allowing you to negotiate with the club during the transfer season and exert control over the player moving up the team hierarchy.

New Pique Adjustments - Just as positioning needs to adapt to the stage
