## Selenium Server Crack X64

Introduction The Selenium Framework provides the programming interface that allows you to control the actions of web browsers. Web browsers are powerful tools that you can use to visit websites, search for information, shop online, sign up for email, surf the web etc. However, they are not very useful if they cannot do more than what you instruct them to do. They are inert, meaning they cannot respond to different situations. To make them more useful, web browser scripting must be used. Selenium is a web browser scripting framework to create and execute tests using popular web browsers, including Internet Explorer, Mozilla Firefox and Google Chrome. With Selenium, you can automate the actions of web browsers on a website, achieve full coverage of a page and use the latest improvements in web browsers to improve the quality and effectiveness of your software testing. Check out the Selenium WebDriver or Selenium Automation framework. Note: Selenium Server can be accessed through a Web browser, only Firefox and Chrome are supported.
