I would like to use the .NET framework Class Library "System.Management.dll" which is a classic.NET dll. I'm writing a WPF application with C#. The problem I have is I can't figure out how to use this dll (dll is just a nuget package) in Visual Studio 2010. In a comment on this Question, I was told to create a static class that exports methods from this DLL: public static class DLLClass { [DllImport("kernel32.dll")] [return: MarshalAs(UnmanagedType.Bool)] public static extern bool AllocConsole(); [DllImport("kernel32.dll")] [return: MarshalAs(UnmanagedType.Bool)] public static extern bool FreeConsole(); [DllImport("kernel32.dll")] public static extern IntPtr GetStdHandle(int nStdHandle);more code... What would I put in the DllImport statements in a DLL that I can use? Also what would I put in the [] brackets in the comments? A: Another option is to use a command line application (a.exe). To do this just create a new console application project in Visual Studio using the .NET Framework class library as the project template. Then create an exe project to run the program. 1c3b3666d
